

PARTNERS III OPPORTUNITY FUND

Portfolio Managers: Wally Weitz, CFA & Drew Weitz

Investment Style: Long-Short Equity

The Partners III Opportunity Fund's Institutional Class returned -13.84% in the second quarter, compared to -16.10% for the S&P 500 and -16.70% for the Russell 3000. Year-to-date, the Fund's Institutional Class returned -18.22% compared to -19.96% for the S&P 500 and -21.10% for the Russell 3000.

Equity market returns in the first and second quarters of 2022 made for the most challenging start to a year in decades, as inflation approached a 40-year high. After years of accommodative monetary policy, the Federal Reserve has assertively reversed course, engaging in a series of progressively larger interest rate hikes. The Fed has acknowledged these actions have increased recessionary risks but are necessary to quash inflation expectations before they fully take root. The inflation fight is far from over, however, with more interest rate hikes on the horizon. Meanwhile, swift market declines reflect investors' diminishing hopes for a so-called "soft landing" (i.e., implementing tighter monetary policy without triggering a recession).

The breadth and depth of declines this quarter left investors with no place to hide. Last quarter's top performer, Berkshire Hathaway, reversed course and became the largest detractor to quarterly performance (but remains a year-to-date relative outperformer). Amazon.com shares have lagged as the company works through a pandemic-induced growth hangover, while investors continue to take a "wait and see" approach to Meta Platforms' (Facebook parent) ability to monetize its "Reels" short-form video format while working through challenges from Apple's iOS advertising changes. Alphabet and Liberty SiriusXM round out the quarter's top detractors, though that is a function of their large position sizes rather than outsized stock price declines.

As market declines intensified, our short positions against ETFs that track the S&P 500 and Nasdaq 100 indexes were the primary bright spots in the second quarter and year-to-date.

Coming into 2022, the Fund's short exposure was 22% of net assets, and our effective net long position was 76%. As the market selloff accelerated, we stepped up our activity covering shorts in the second quarter. At quarter end, we maintained a modest 3% short position against an S&P 500 ETF, the lowest level in recent years. Our Nasdaq 100 ETF short position has been fully closed.

We have written in recent quarters that as valuations become stretched, our short position allows us to reduce our equity exposure without selling any specific holding. In this way, we postpone taking realized gains, eliminate future timing decisions on when to buy something back, and allow our companies' business value growth to continue compounding in our favor. Conversely, when stocks fall, covering shorts allows us to increase our equity exposure to a carefully curated collection of businesses we know well and believe are well positioned for the future. Importantly, we are not trying to "call a bottom" for the market, and we acknowledge that stocks may fall further. Nevertheless, with valuation levels well off their highs and a view that our own portfolio of high-quality businesses now trades at compelling prices, we elected to materially increase our effective net long position, ending the quarter at 94% of net assets (compared to 76% at the end of 2021).

Consistent with that approach, portfolio activity among our long holdings tilted toward purchases. We added to almost half our holdings by varying degrees, and we were pleased to initiate new positions in Danaher and Roper Technologies at attractive prices. Danaher is a provider of instruments and diagnostic tools to medical, life science, and other desirable end-markets worldwide. Originally an industrial equipment manufacturer, Roper has successfully evolved into a provider of software and technology services. (Investors can find an in-depth discussion of our Roper Technologies investment thesis in colleague Barton Hooper's [November 2021 "Analyst Corner" feature](#).) Both businesses generate significant free cash flow, possess strong competitive positions, and have excellent management teams with demonstrated acquisition records. As we describe in our latest "Value Matters," we believe these are characteristics that allow companies to "make their own breaks," regardless of the near-term challenges we may face. During the quarter, we sold our remaining shares of Qurate Retail's common equity but maintain a position in the company's 8% preferred shares.

Looking ahead, although recent market declines have been painful, we believe we own a collection of very good businesses trading at attractive valuations. Investment returns never follow a schedule, but from these prices, we believe the potential exists for very good returns in the coming years.

VALUE MATTERS: Certain Uncertainty

After a rough first half of the year for stocks and bonds, the world continues to face questions related to inflation, interest rates, and earnings — wars, pandemics, and politics. And while uncertainty is a permanent condition for investors, the important thing is to own quality businesses with competent management teams that can cope with change and adversity.

Data is for the quarter ending 06/30/2022. The opinions expressed are those of Weitz Investment Management and are not meant as investment advice or to predict or project the future performance of any investment product. The opinions are current through 07/20/2022, are subject to change at any time based on market and other current conditions, and no forecasts can be guaranteed. This commentary is being provided as a general source of information and is not intended as a recommendation to purchase, sell, or hold any specific security or to engage in any investment strategy. Investment decisions should always be made based on an investor's specific objectives, financial needs, risk tolerance and time horizon.

Data quoted is past performance and current performance may be lower or higher. Past performance is no guarantee of future results. Investment return and principal value of an investment will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Please visit weitzinvestments.com for the most recent month-end performance.

Investment results reflect applicable fees and expenses and assume all distributions are reinvested but do not reflect the deduction of taxes an investor would pay on distributions or share redemptions. Net and Gross Expense Ratios are as of the Fund's most recent prospectus.

The Gross Expense Ratio reflects the total annual operating expenses of the fund before any fee waivers or reimbursements. The Net Expense Ratio reflects the total annual operating expenses of the Fund after taking into account any such fee waiver and/or expense reimbursement. The net expense ratio represents what investors are ultimately charged to be invested in a mutual fund.

On 12/30/2005, Partners III Opportunity Fund succeeded to substantially all of the assets of Weitz Partners III Limited Partnership. The investment objectives, policies and restrictions of the Fund is materially equivalent to those of the Partnership, and the Partnership was managed at all times with full investment authority by the Investment Adviser. The performance information includes performance for the Partnership. The Partnership was not registered under the Investment Company Act of 1940 and, therefore, were not subject to certain investment or other restrictions or requirements imposed by the 1940 Act or the Internal Revenue Code. If the Partnership had been registered under the 1940 Act, the Partnership's performance might have been adversely affected.

Performance quoted for Investor Class shares before their inception (08/01/2011) is derived from the historical performance of the Institutional Class shares and has not been adjusted for the expenses of the Investor Class shares, had they, returns would have been different.

Index performance is hypothetical and is shown for illustrative purposes only. You cannot invest directly in an index. The **Russell 3000** measures the performance of the largest 3,000 U.S. companies representing approximately 98% of the investable U.S. equity market. The **S&P 500** is an unmanaged index consisting of 500 companies generally representative of the market for the stocks of large-size U.S. companies.

Definitions: Effective net is the **effective long** (the sum of the portfolio's long positions, such as common stocks, or derivatives where the price increases when an index or position rises) minus the **effective short** (the sum of the portfolio's short positions, such as derivatives where the price increases when an index or position falls).

Consider these risks before investing: All investments involve risks, including possible loss of principal. These risks include market risks, such as political, regulatory, economic, social and health risks (including the risks presented by the spread of infectious diseases). In addition, because the Fund may have a more concentrated portfolio than certain other mutual funds, the performance of each holding in the Fund has a greater impact upon the overall portfolio, which increases risk. See the Fund's prospectus for a further discussion of risks related to the Fund.

Investors should consider carefully the investment objectives, risks, and charges and expenses of a fund before investing. This and other important information is contained in the prospectus and summary prospectus, which may be obtained at weitzinvestments.com or from a financial advisor. Please read the prospectus carefully before investing.
